No more mission impossibles.

LM ErgoAccess

New revolutionary handle design lifts the instrument ergonomics to a whole new level. Curved handle provides a natural hand-fit and allows easy access to difficult-to-reach treatment areas. No more mission impossibles in the molar area or with inclined incisors. No more sidestepping the nose in the front. Delicate elliptical blades of the H-Scalers remove supra- and subgingival calculus effectively in deep narrow pockets and concave root surfaces. They can be used with both vertical and horizontal techniques.

H-Scaler I
LM 112-156 EASi

H-Scaler II
LM 156-157 EASi

Provides easy access to molar area even with smaller oral aperture.

The curved handle allows access to difficult-to-reach areas such as distal surfaces of molars and lingually inclined incisors.
