

Handle Selection

Most LM instruments are available with either LM-ErgoNorm or LM-ErgoMax handles. The thinner LM-ErgoNorm handle functions best in light clinical procedures. The hand fit plays a role in selecting a handle type. By interchanging ErgoNorm and ErgoMax handle types, the user's hand is placed under even less strain. All LM instrument handles are exceptionally ergonomic due to the elastic silicone coating and optimised contouring.

ErgoNorm

ErgoMax

ErgoSingle

Well balanced mirror handle with better reachability.

ErgoAccess new

New curved LM-ErgoAccess handle provides better access to hard-to-reach areas. Available for specified instruments.

The instrument name and code number are imprinted on the handle. Other printed codes are e.g. the lines which denote either blade size, angle curvature or measuring scale.

When ordering remember to mention the code for handle type:

Si = ErgoNorm handle
(Ø 8.5 mm)

XSi = ErgoMax handle
(Ø 11.5 mm)

ESi = ErgoSingle handle
(Ø 11.5 mm)

EASi = ErgoAccess handle
(Ø 11.5 mm curved)
